HiPette - Fully Autoclavable Mechanical Pipette LHP3

The new generation of fully autoclavable manual pipettes is lightweight, precise, stable and durable. It adopts new piston structure, metal screw structure and other technologies to reduce the pipetting resistance.

It can withstand high temperature and high-pressure sterilization, resist strong chemical corrosion and have a long service life. In addition, the volume lock helps achieve more precise pipetting operations.

Ultra-light Body: The weight is less than 75 g, which can reduce fatigue and bring a comfortable pipetting experience.

Accurate Pipetting: new piston seal structure combined with metal screw to achieve more accurate pipetting and effectively reduce the pressing force.

Complete sterilization: Strong materials ensure HiPette can fully autoclavable, UV sterilizable and resistant strong chemical corrosion.

Smooth Knob Adjustment: Light and smooth range adjustment.

One Key Volume Lock Setting: Prevent pipetting errors caused by touching the adjusting knob by mistake.

Volume Display Window: The counter increment is one thousandth of the range, no calibration required for pipetting less than 50,000 times.

With Filter Element: Reduce volatile reagents into pipette body; avoid liquid backflow and prevent piston corrosion.

Forward pipetting and reverse pipetting: Calibration certificate according to DIN ISO 12650
Compatible with a wide range of tips

Natural Convection Incubators

from RT+5 to 70 °C

The organic materials used in the typical laboratory application require a constant and gentle heating. The temperature distribution in the incubators is obtained without forced air circulation but using only the natural convection, which does not stress the sample and allows its uniform growth.

The wide door glass window allows a constant check of the status of the samples inside the chamber without opening the door, thereby avoiding unnecessary heat loss and temperature changes.

DHS - The Digital Revolution

DHS, **Digital High Sensor**, is our new pH-sensor technology. These electrodes have an internal chip and stores all relevant calibration data, date of last calibration, slope, model and production batch.

If you connect a DHS-electrode with an DHS instrument, all data will be transferred from the chip into the instrument and the user can start immediately with its measurements without any additional calibrations. The new DHS-electrodes do not need an internal battery and can be connected by a normal BNC-connector.

All instruments equipped with the new **DHS Technology** can also be equipped with normal analog pH-electrodes. PH measurement was never easier.

All electrodes can be maintained and calibrated by one central person in the lab.

In use, every electrode will be allocated to one pH-meter

Ozone - Generator OZ-10 • OZ- 30

Ozone (O₃) is a very strongly oxidizing molecule made up of 3 oxygen atoms. It is present as a gas and decomposes very quickly to normal oxygen (O₂) under normal conditions in the air.

OZ-10

Due to its high oxidizing effect, Ozone is one of the strongest disinfectants.

If it is artificially generated in an ozone generator, it can be used very effectively in the fight against bacteria, viruses, fungi, and spores.

In this way, entire rooms can be disinfected quickly and efficiently without the use of expensive chemicals and without a considerable amount of work.

Ozonation is carried out during non-working hours, e.g. at night.

A built-in timer automatically switches the ozone generator on and off at the desired time.

The next morning, the excess ozone has already dissipated, and the room can be reentered.

Now the room is ventilated and can be used normally.

OZ-10 • OZ-30

- Effective against bacteria, viruses, and germs
- Effective even in hard-to-reach places
- Fast, also unscheduled implementation
- No staff and chemical costs
- Flexible to use
- Low investment needs
