

Good study results, better night's sleep

Alice PDx Diagnostic System

The Alice PDx is a portable, diagnostic recording device for OSA screening, follow-up and diagnostic assessment of cardio-respiratory sleep disorders.

The Alice PDx enables you to test your patients outside of the lab without compromising study results, helping you to avoid the costs associated with retesting.

The Alice PDx incorporates our unique Good Study Indicator (GSI)*. The GSI is predicated on airflow and oximeter signal quality and displays the amount of "good quality data" needed for a study to be

complete and valid. The indicator measures patient airflow, gathered by the nasal cannula and/or the oral thermistor, airflow from therapy devices, and pulse oximetry, gathered by the SpO₂ sensor. Without either of these signals, the sleep study would be declared diagnostically invalid because of insufficient data.

Optional Equipment

ECG yoke; ExG yoke; ECG and neurological electrodes (for ExG); therapy device communication cable; ventilation device communication cable

Basic PC Recommendations

- Windows-compatible personal computer running Windows Vista Business, Windows XP Professional or 2000 with a CD-RW drive.
- Intel Pentium 3 processor (500 MHz) or greater, 32-bit (x86) processor (1 GHz) required for Windows Vista computers
- 512 MB system memory, 1 GB or higher for Windows Vista computers

The base configuration channel set supports testing requirements for levels three and four and includes:

- nasal pressure cannula
- oral thermistor
- zRIP abdominal and chest belts
- SpO₂
- body position

In addition to the basic channel set indicators, there are also indicators for the optional ECG and ExG yokes and the optional therapy interface.

Battery Indicator –
indicates power level.

Memory Card Indicator –
provides estimated memory capacity.

Good Study Indicator –
configurable for the number of hours required for a valid study

Device Error Indicator –
indicates the need for service.

Status Indicator –
displays green to indicate proper operation or yellow for operation error (i.e., disconnected sensor).
